

## Publishing Interactive Adobe Captivate Presentations as Canvas Assignments

1. Use Captivate to export your presentation as a zipped HTML5 package:

With your presentation open in Captivate, choose **File, Publish** from the top menu.

The **Publish for Devices** dialog appears. Enter a **Location** on your local machine in which to save your file, and make sure to check **Zip Files** before clicking the **Publish** button.

**Publish for Devices**

Publish as: HTML5

Project Title:

Location:

Zip Files

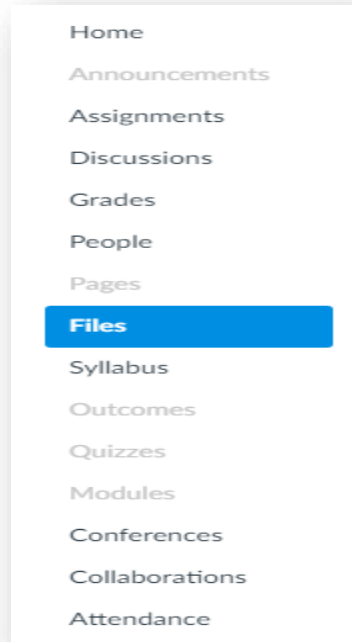

Typekit Domains:  **Tk** ?

Add up to ten domains, e.g. \*.adobe.com, localhost, 127.0.0.1

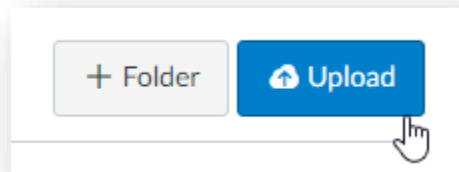

Slides: 45	Mobile Gestures: <a href="#">Yes</a>
Slides With Audio: 27	Geolocation: <a href="#">No</a>
Audio Settings: <a href="#">Custom</a>	Accessibility: <a href="#">Yes</a>
Display Score: <a href="#">Yes</a>	eLearning output: <a href="#">Disabled</a>

2. Import your zipped HTML5 package into Canvas:

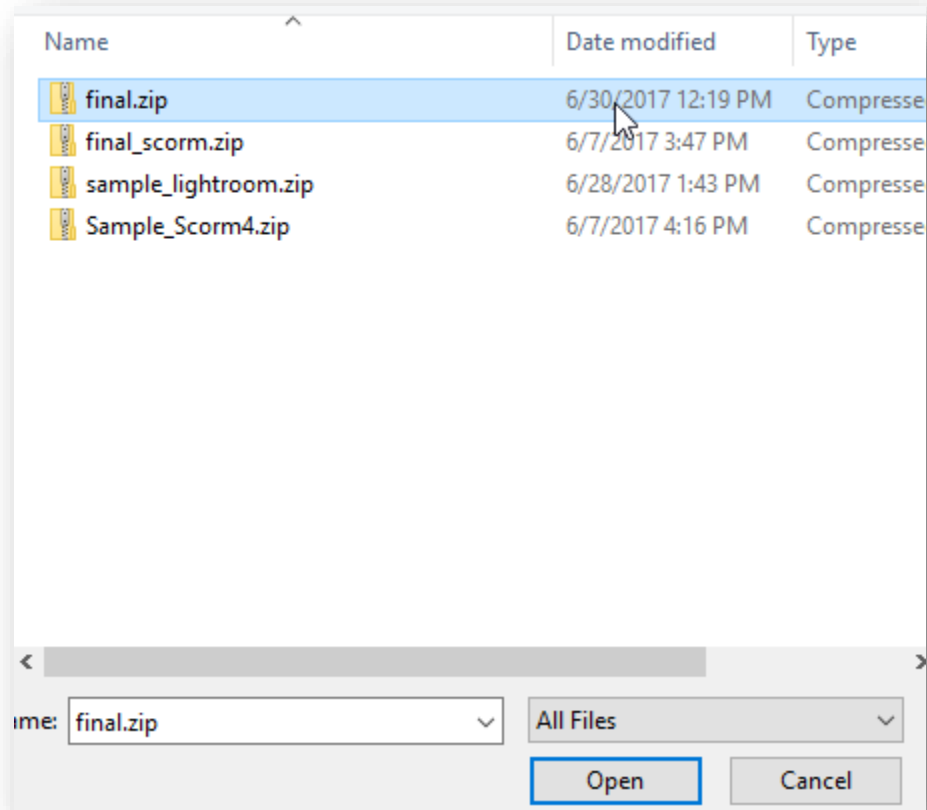

In Canvas, choose **Files** from the left menu:

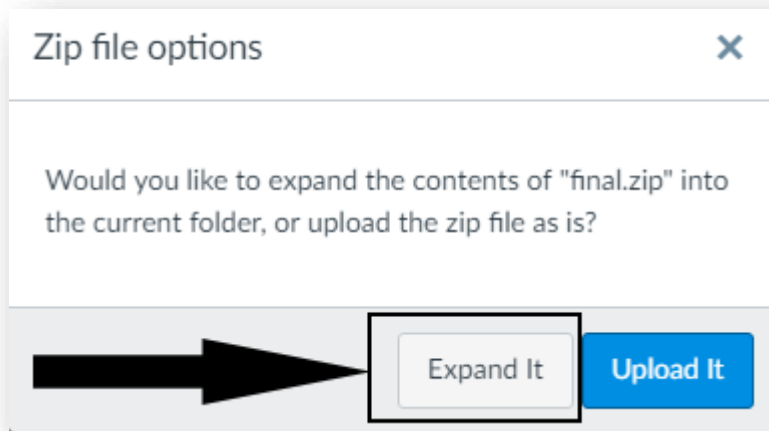

...then click **Upload**:

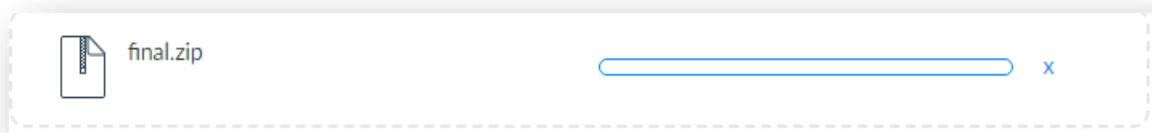

Select the file you exported from Captivate above, and then click **Open**.

The **Zip File Options** dialog appears; choose **Expand It** to expand its contents into your Canvas Files area.

You will see this progress bar while your file expands...

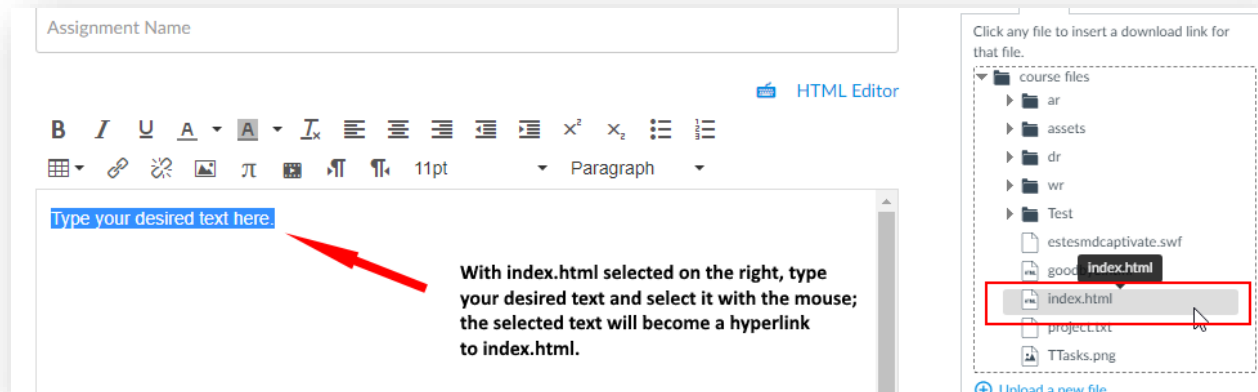

...and a file listing when the operation completes:

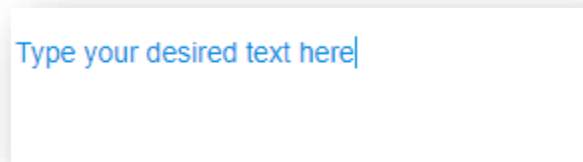

Name ▲	Date Created	Date Modified	Modified By	Size	
ar	12:38pm		--		✓
assets	12:38pm		--		✓
dr	12:38pm		--		✓
goodbye.html	12:38pm	12:38pm		153 bytes	✓
index.html	12:38pm	12:38pm		8 KB	✓
project.txt	12:38pm	12:38pm		73 KB	✓
wr	12:38pm		--		✓

### 3. Insert a hyperlink to your presentation into a Canvas assignment:

With an assignment open, type the desired text for your new hyperlink and highlight it; then click **index.html** from the Files listing in the right panel.

Now your text should turn blue to indicate an active hyperlink to your imported presentation's **index.html** file.

After you save your new assignment, click your new hyperlink to make sure that your presentation launches normally.
